INTRODUCTION

Ten ideas you will see in this deck, explained simply

Intellectual property (IP)

What it is: Something you created that the law protects, like a book, song, course or design.

Think of it as: Like owning the rights to a song you wrote: others need your permission to copy or sell it.

How it is used: Registering a copyright with the U.S. Copyright Office is what lets you enforce it in court.

Distribution channel

What it is: A company that sells your work to buyers, such as Amazon KDP or IngramSpark.

Think of it as: The stores and services between you and your buyer, the way an app store sits between developers and users.

How it is used: Every industry picks channels: apps use app stores, bands use streaming.

Gross-to-net and unit economics

What it is: The path from the price a buyer pays to the money you keep, one sale at a time.

Think of it as: A receipt showing every cut taken out of the price before you get paid.

How it is used: Pharma, consumer goods and music all track gross-to-net.

Contribution margin

What it is: Money left from one sale after the costs of making that sale.

Think of it as: What each sale adds toward paying off your launch costs.

How it is used: Restaurants and retailers price menus and products with it.

Cost variance analysis

What it is: Explaining why one result costs more than another by splitting the gap into causes.

Think of it as: Pinpointing exactly which cost made your take-home smaller than another option's.

How it is used: Finance teams use it every month to compare plan vs actual.

Breakeven analysis

What it is: How many sales it takes to earn back what you spent to start.

Think of it as: The sale that finally pays back everything you spent to launch.

How it is used: Startups, factories and new product launches all use it.

Sensitivity and scenarios

What it is: Changing one number, or a few at once, to see what moves the result.

Think of it as: Asking 'what if?' before you commit money.

How it is used: Budget planning, investment cases and infrastructure finance.

A/B testing

What it is: Comparing two versions fairly to see which one really works better.

Think of it as: Testing two video thumbnails and keeping the one more people click.

How it is used: Websites, apps and marketing teams run these daily.

Cash timing (DSO)

What it is: How many days pass between a sale and the money reaching your bank.

Think of it as: A job that pays you a month after you work the shift.

How it is used: Every business plans cash this way to pay its bills.

Pool-based payouts

What it is: Getting paid a share of one shared pot, split by usage.

Think of it as: Splitting a team's prize money by how many points each player scored.

How it is used: Music streaming royalties and ad networks pay this way.

EXECUTIVE SUMMARY

Three findings drive the decision

$6.79 vs $3.33

The store's cut drives the gap

On a $16.99 paperback, Amazon KDP leaves the creator $6.79 and IngramSpark's bookstore route leaves $3.33. About $2.55 of that $3.47 gap is the store's discount. See the variance.

158 vs 272

Payback depends on contribution per sale

KDP earns back Year-1 costs after 158 sales of one print plus one ebook; IngramSpark needs 272. Platform fees alone are earned back within 42. See breakeven.

16.6 / month

Flat fees only win at volume

A $13.99 monthly plan beats per-sale fees only above about 17 sales of each format a month. See the crossover.

Decision ask: launch on two channels (KDP plus one route picked from your decision path), keep print non-returnable at launch, and run one 90-day A/B test per quarter. Go to the recommendation.

STAKEHOLDERS

Who this is for: five kinds of IP owners

Every IP owner faces the same question: **which sales channels turn a protected work into the most money kept per sale, with risk and cash timing you can live with?** The right answer depends on what kind of business you are, so this deck gives each type its own path.

A

Independent creator

One work, sold mostly on Amazon, small budget.

B

Small press or imprint

Wants books on bookstore and library shelves.

C

Catalog or backlist owner

Many titles that sell steadily every month.

D

Brand, educator or corporate IP owner

Has its own audience: events, courses, clients, a website.

E

Wide ebook strategist

Digital-first, wants readers on every store.

Also inside: guidance for finance and FP&A, marketing, rights and legal, and investors (jump to roles). Click a card to jump to that path.

MARKET CONTEXT

Mainstream benchmarks frame the opportunity

$33.4B

U.S. publisher revenue, 2025

+2.5% vs 2024

$65 → $85

Standard Application fee

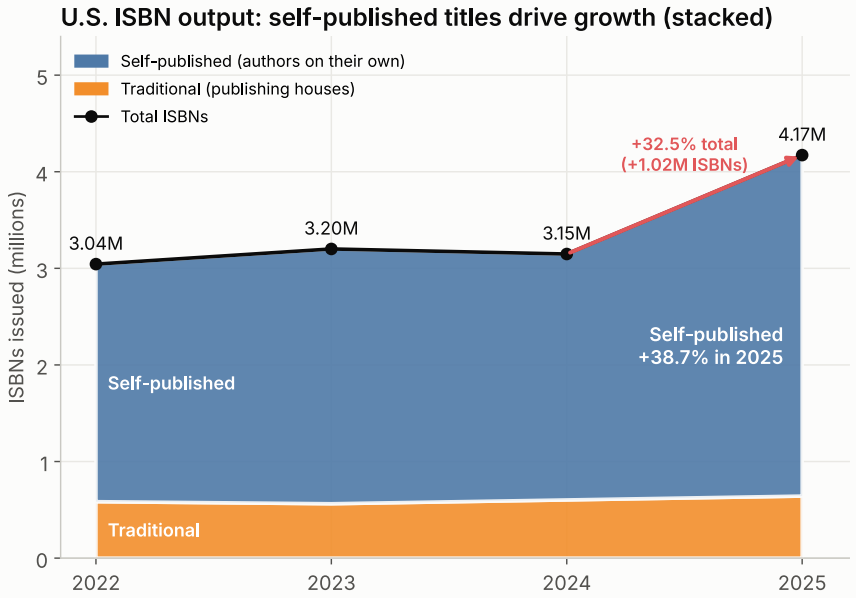

New fee schedule from mid-November 2026

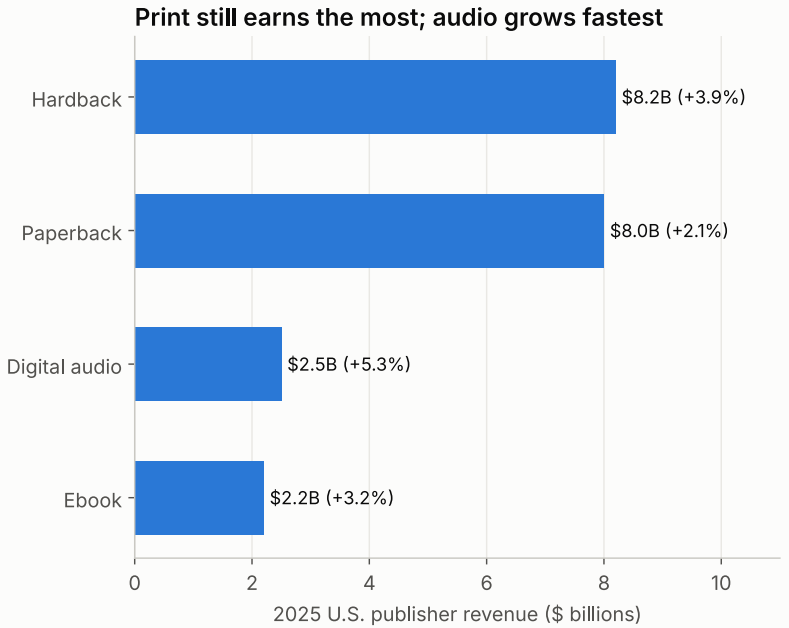

Hypebot on the 2026 USCO fee schedule ↗

In plain words: the number of new books jumped by about a third in 2025, but the number of printed books people bought barely moved. More creators are competing for the same readers, so the money you keep from each sale matters more every year.

MARKET CONTEXT

More books, the same number of buyers

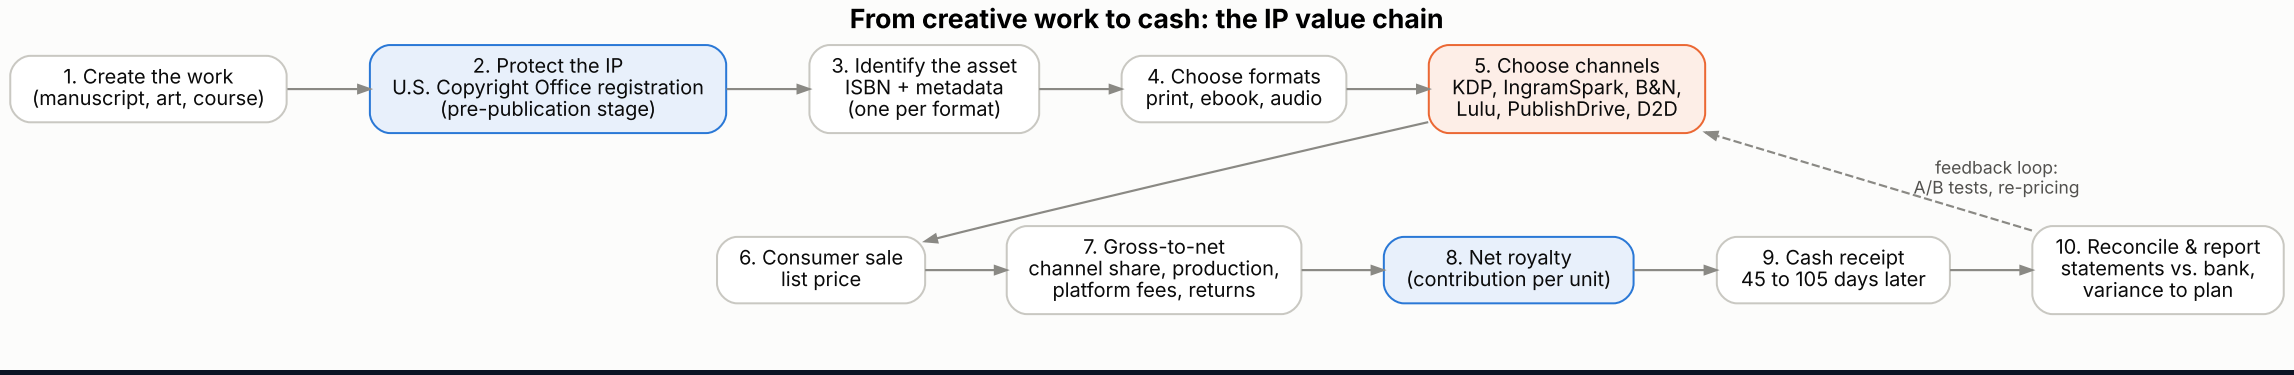

As of October 11, 2026: Every book edition gets an ID number called an ISBN, so counting ISBNs shows how many new books come out. Self-published titles (blue) jumped 38.7% in 2025 while printed-book sales stayed flat. More books are competing for the same buyers, which makes the share of each sale you keep more important.

As of October 11, 2026: This splits 2025 U.S. book revenue by format. Hardbacks and paperbacks still bring in about $16 billion of the $33.4 billion total, while audiobooks are smaller but grew fastest (+5.3%). That is why print distribution choices carry the most dollars.

Data as of October 11, 2026. Sources: Bowker data via Publishers Weekly, March 23, 2026; Association of American Publishers, StatShot Annual Report 2025

PROCESS FLOW

The IP value chain: from protected work to cash in the bank

Step 2 is where rights are secured. Certain works covered here are in the initial stage of pre-publication copyright registration with the U.S. Copyright Office. Registration lets an owner file an infringement suit over a U.S. work and seek statutory damages, so it is counted as a launch cost ($85 under the new fee schedule).

In plain words: you make something, protect it, give it an ID, choose formats and stores, and then money flows back to you after each store takes its share. The dashed arrow means you keep testing and adjusting.

Prices, fees and rates as of October 11, 2026. Sources: U.S. Copyright Office, FY2025 Facts at a Glance; Hypebot on the 2026 USCO fee schedule; U.S. Copyright Office processing times

CHOICE SET

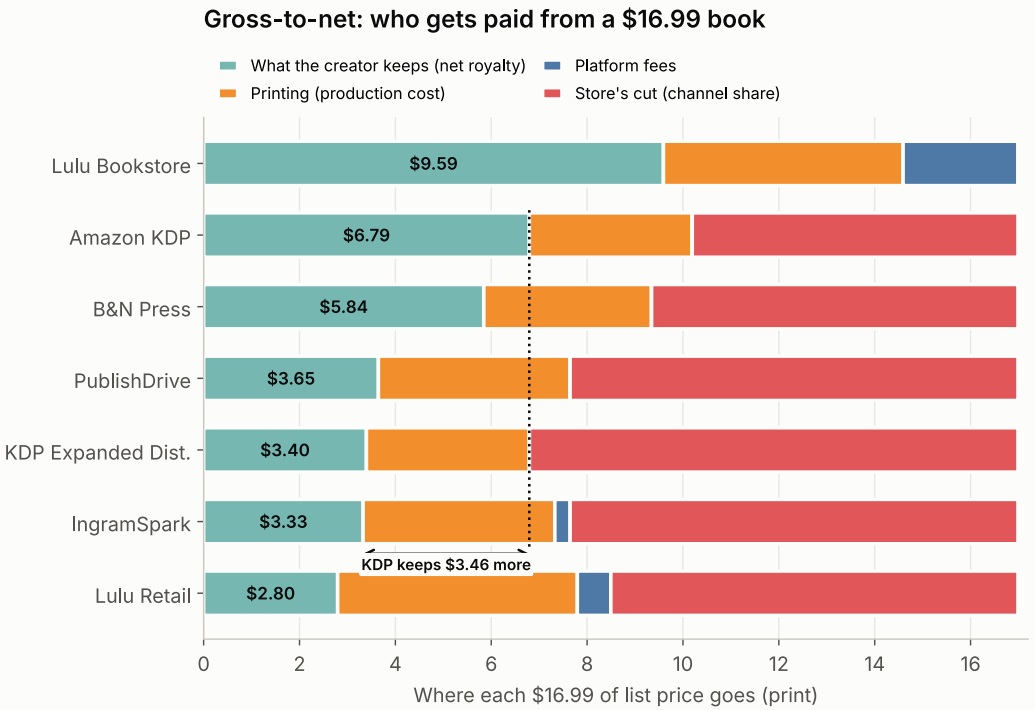

Six options, three ways of charging

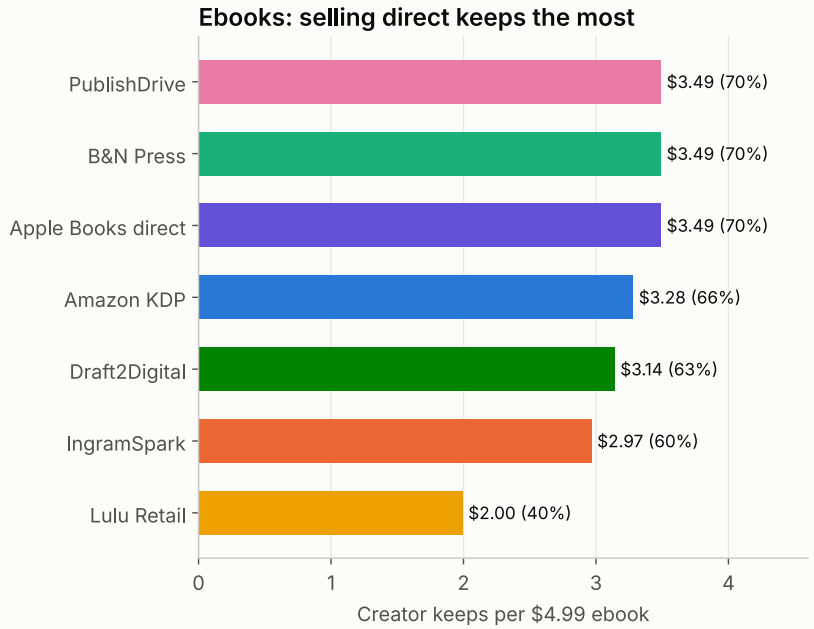

Platform	Print	Ebook	Fixed cost	Payment terms	Reach
Amazon KDP	60% of list minus print	70% ($2.99 to $9.99)	Free	~60 days after month end	Amazon only
IngramSpark	List minus 35 to 55% discount, print, 1.875% fee	85% of store payout	Free setup; own ISBN	~90 days after month end	Bookstores, libraries, 45,000+ outlets
B&N Press	55% of list minus print	70% flat	Free; print ISBN free	~30 days after month end	BN.com (U.S.)
Lulu	Retail: 50% fee, print, then 20% commission	Fee plus commission	Free; proof required	Monthly	Own store, retail, your site
PublishDrive	Ingram network, 0% commission	100% of store payout	$13.99 to $83.99/mo	Monthly	400+ stores
Draft2Digital	Print via partners	~90% of store payout	$20 account fee	Monthly, ~60-day lag	Apple, Kobo, Google, libraries

In plain words: some stores sell to buyers directly (KDP, B&N), some act as a wholesaler that charges per sale (IngramSpark, Lulu, Draft2Digital), and one charges a flat monthly fee and takes nothing from each sale (PublishDrive).

Prices, fees and rates as of October 11, 2026. Sources: IngramSpark Help Center: 2026 pricing changes; Profitable.app KDP royalty calculator; B&N Press Help Center: Getting paid; Chapter: Lulu pricing (Sep 2026); PublishDrive Help: pricing plans; PublishDrive vs Draft2Digital (Apr 2026); ScribeCount platform comparison

Gross-to-net: how much of each sale the creator keeps

As of October 11, 2026: Each bar is one $16.99 book split by who gets paid. Red is the store's cut, orange is printing, blue is platform fees, and teal is what the creator keeps. KDP leaves the creator $6.79, while IngramSpark's bookstore route leaves $3.33. Finance teams call this breakdown gross-to-net.

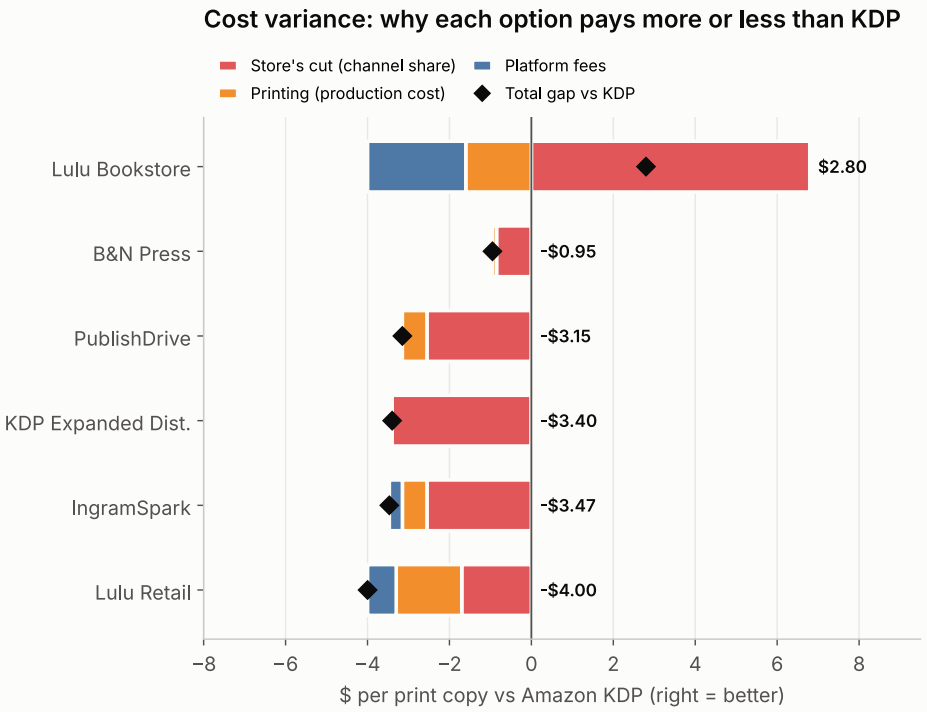

As of October 11, 2026: For a $4.99 ebook, each bar shows what the creator keeps after the store and any middleman are paid. Selling directly to Apple or B&N keeps $3.49. Aggregators like Draft2Digital keep 35 to 52 cents more per sale in exchange for sending your book to many stores with one upload.

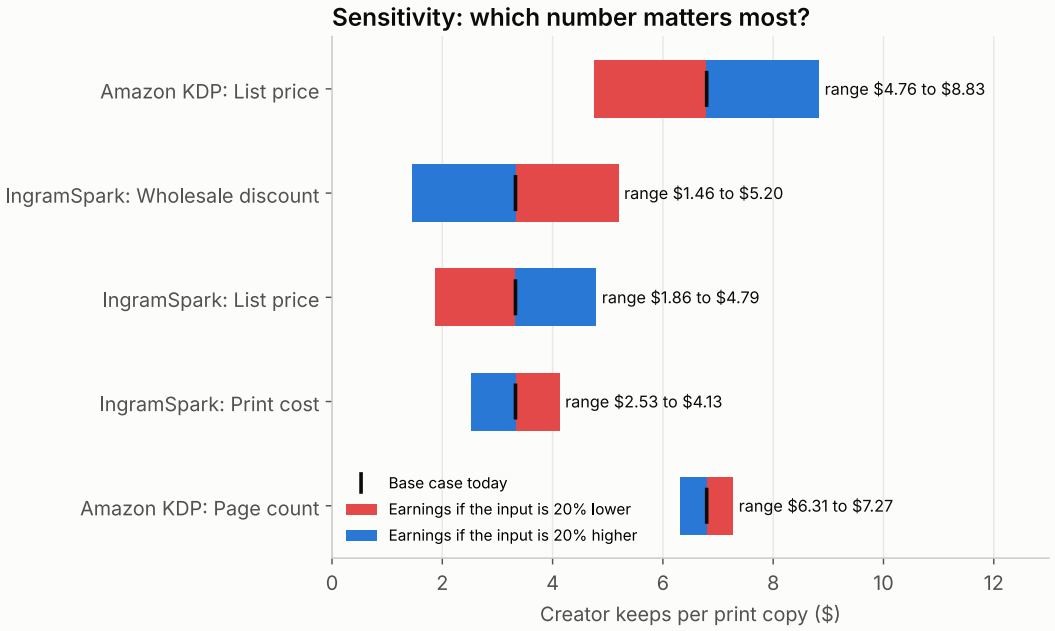

Data as of October 11, 2026. Sources: Platform rates from IngramSpark, KDP, B&N Press, Lulu and PublishDrive (see Sources); ScribeCount store rates; KDP, Draft2Digital and IngramSpark terms

Prices, fees and rates as of October 11, 2026. Sources: Profitable.app KDP royalty calculator; IngramSpark Help Center: 2026 pricing changes; B&N Press Help Center: Getting paid; Chapter: Lulu pricing (Sep 2026); ScribeCount platform comparison; PublishDrive vs Draft2Digital (Apr 2026)

COST VARIANCE ANALYSIS

Why some options pay less, and which number matters most

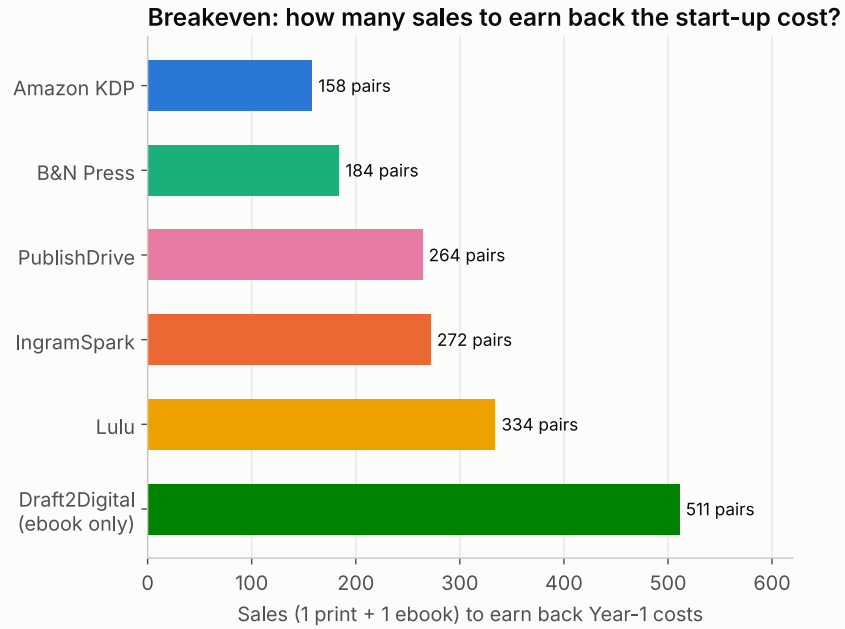

As of October 11, 2026: This is a cost variance analysis: every option is compared with Amazon KDP. Bars left of zero mean you keep less per book than on KDP, and each color is one cause (red = store's cut, orange = printing, blue = platform fees). For most options, the store's cut explains most of the gap.

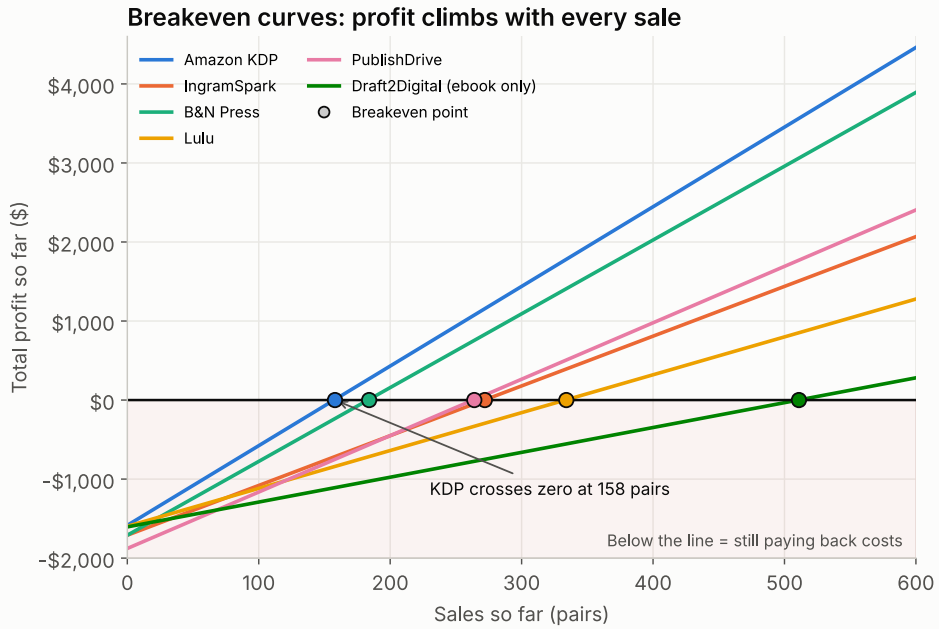

As of October 11, 2026: Sensitivity analysis changes one input by 20% up or down while holding everything else steady. The wider the bar, the more that input moves your earnings. List price has the biggest effect, which is why price is the first thing worth testing.

Data as of October 11, 2026. Sources: Model in this repository; KDP print royalty of $6.79 is the baseline; Model in this repository; each input flexed 20% with others held steady

BREAKEVEN ANALYSIS

How many sales it takes to earn back the start-up cost

As of October 11, 2026: Breakeven is the number of sales needed to earn back what you spent to launch: the copyright fee, platform fees and a production budget. Each sale's contribution chips away at that total. KDP gets there after 158 sales of a print book plus an ebook; Draft2Digital alone needs 511.

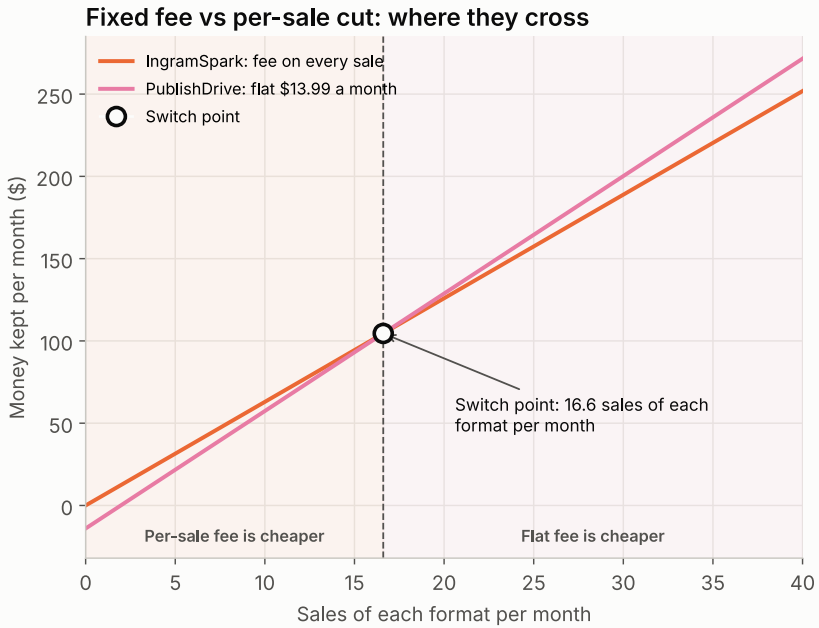

As of October 11, 2026: Each line tracks total profit as sales add up. Every line starts below zero because of launch costs, and the point where it crosses the black zero line is breakeven. Steeper lines mean each sale contributes more, so they reach profit sooner.

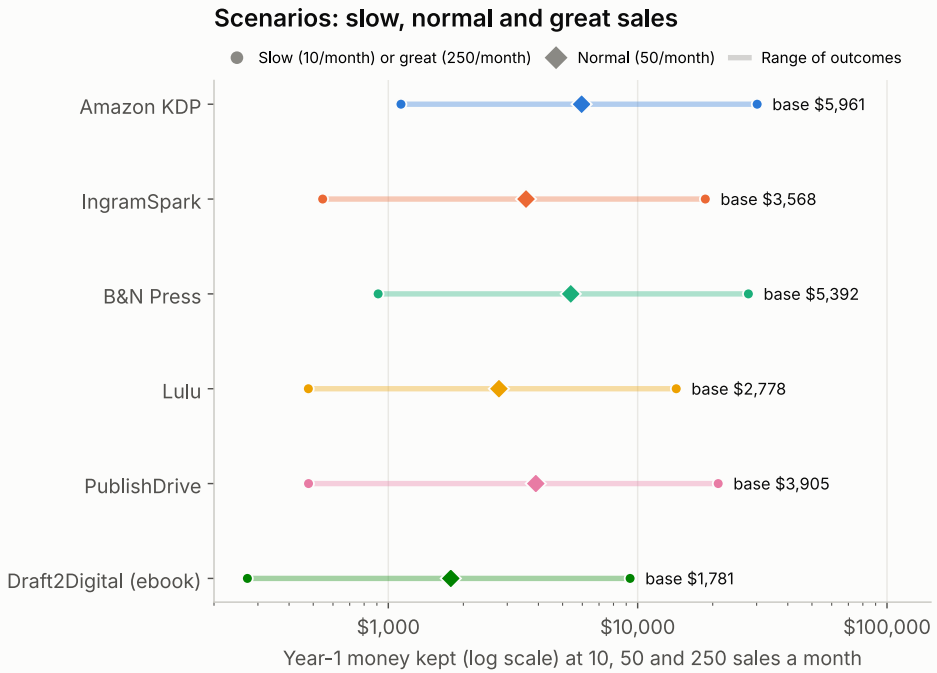

Data as of October 11, 2026. Sources: Fixed costs = platform fees + $85 copyright registration + $1,500 illustrative launch budget + subscriptions; Model in this repository

Formula: breakeven sales = Year-1 fixed costs ÷ money kept per sale. The $1,500 launch budget is a placeholder; replace it with your own. Data as of October 11, 2026.

BREAKEVEN ANALYSIS

When a flat fee beats a per-sale cut, and what if sales are slow or great

As of October 11, 2026: PublishDrive charges a flat $13.99 a month (pink line), while IngramSpark takes a small fee from every sale (orange line). At low sales the per-sale fee costs less, but past about 17 sales of each format a month the flat fee wins. This is the classic fixed-cost versus variable-cost trade-off.

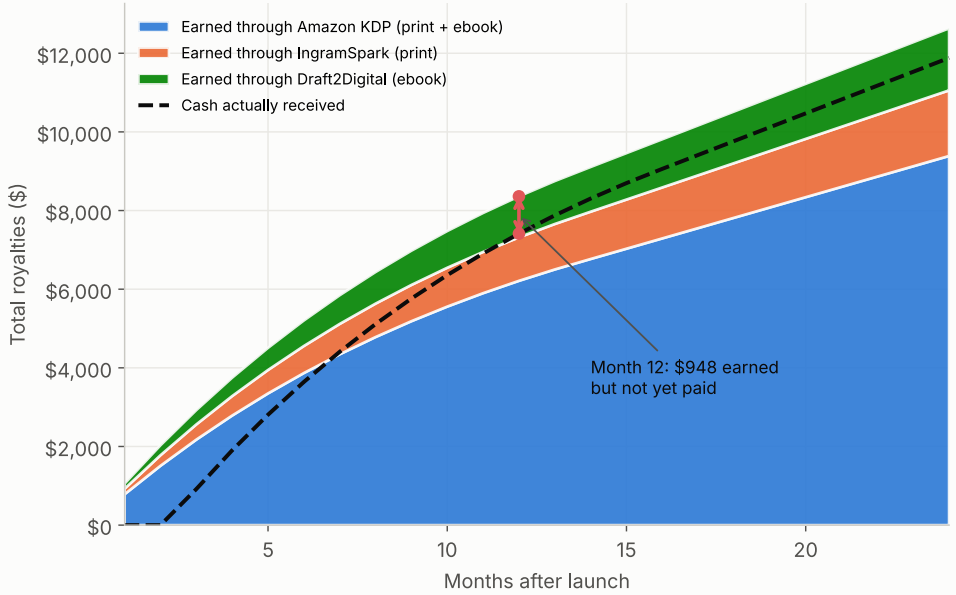

As of October 11, 2026: Scenario analysis asks 'what if?' at three sales levels: slow (10 a month), normal (50) and great (250). Each line runs from the slow result to the great result, with the diamond at normal. KDP finishes first in every case, so the decision holds up even if the sales forecast is off.

Data as of October 11, 2026. Sources: PublishDrive Help Center pricing; IngramSpark 2026 fees; Model in this repository; planning scenarios, not forecasts

Prices, fees and rates as of October 11, 2026. Sources: PublishDrive Help: pricing plans; IngramSpark Help Center: 2026 pricing changes; Profitable app KDP royalty calculator; B&N Press Help Center: Getting paid

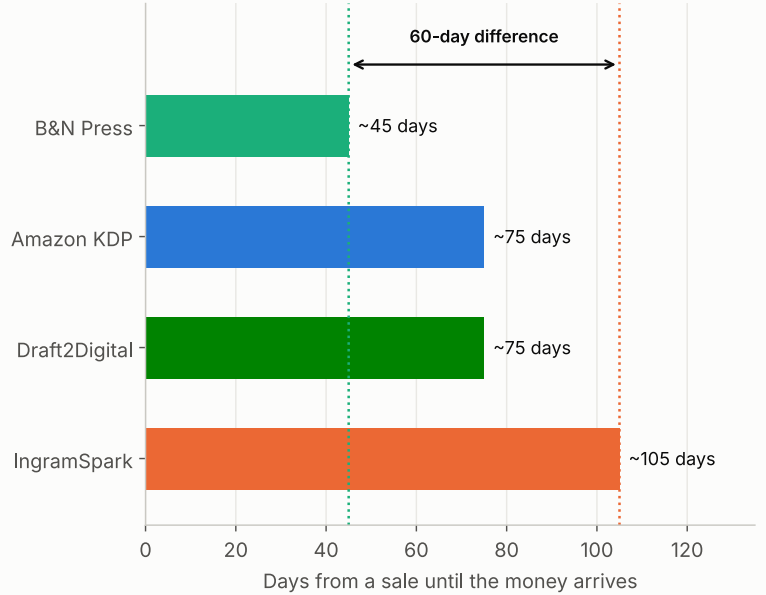

Earning money is not the same as having it

Earned vs paid: money arrives late

As of October 11, 2026: The stacked areas show royalties earned over 24 months, and the dashed line shows cash actually received. Stores pay two to three months after a sale, so earnings run ahead of cash, leaving $948 still owed at month 12. Accountants call this the difference between accrual and cash.

Days sales outstanding: how long you wait to get paid

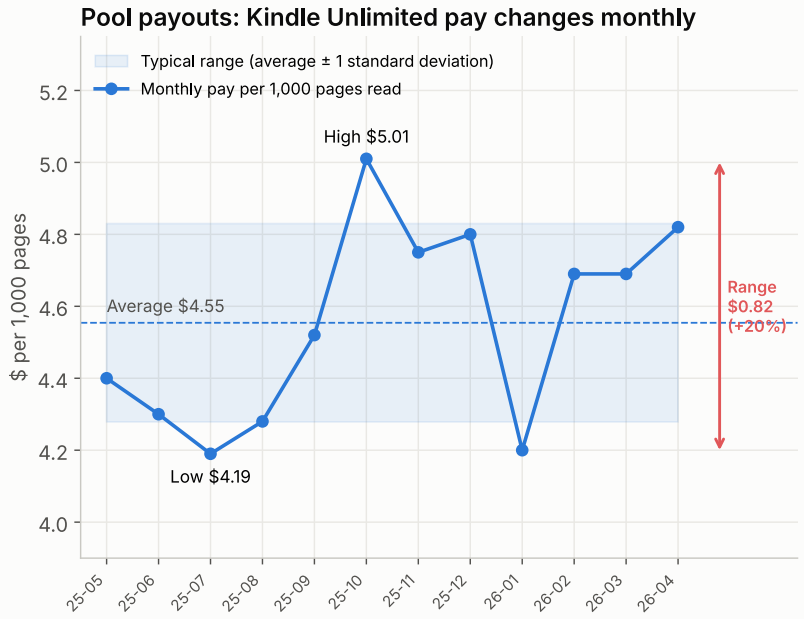

As of October 11, 2026: Days sales outstanding (DSO) measures how long you wait to get paid after a sale. B&N Press pays in about 45 days, while IngramSpark takes about 105. Longer waits mean you need more cash on hand to cover costs in the meantime.

Data as of October 11, 2026. Sources: Model in this repository; launch curve and 65/35 channel mix are illustrative; B&N Press Help Center; IngramSpark Agreement Sec. 9; The Book Designer; Books.by

Prices, fees and rates as of October 11, 2026. Sources: B&N Press Help Center: Getting paid; IngramSpark Agreement (Lightning Source); The Book Designer; B&N Press review; Books.by; Draft2Digital comparison; Written Word Media 2025 Indie Author Survey

Pay that moves every month, and how to test a price fairly

As of October 11, 2026: Kindle Unlimited pays authors from one shared monthly pot, split by pages read, so the rate per page changes every month. Over the past year it ranged from $4.19 to $5.01 per 1,000 pages, averaging $4.55. Treat this income as a range, not a fixed number.

As of October 11, 2026: A cheaper price earns less per book, so it only helps if it sells enough extra copies. Each bar shows that minimum boost, called the breakeven lift. In an A/B test, switch to the cheaper option only if sales rise by more than the bar, measured with enough shoppers to trust the result.

Data as of October 11, 2026. Sources: Profitable.app KENP tracker (author-reported), May 2025 to April 2026; Model in this repository; two-proportion z-test, 95% confidence, 80% power

RISK REGISTER

Contract terms that change the economics

Risk	What the agreement says	Rating	Mitigation	Reference
Returns liability	Returnable titles bill returns back to the IP owner; a 180-day tail applies after switching to non-returnable	High	Start non-returnable; test returnability later	Sec. 5.4.5
Payment timing and offsets	Paid ~90 days after month end; can be held or offset for returns and other Ingram accounts	Medium	Plan cash with DSO assumptions; keep a reserve	Sec. 8.5, 9
Counterparty non-payment	IP owner bears its share if a retailer never pays	Low to medium	Reconcile statements monthly	Sec. 8.3
Unilateral changes	Terms and pricing can change; compensation changes take effect after 30 days	Medium	Re-run the model on each change	Sec. 2
Early release	Enabling distribution lets orders ship before the publication date	Medium	Enable distribution only at launch	Sec. 5.1.2
Liability cap	Platform liability capped at $500; broad indemnity owed by the IP owner	Low frequency, high impact	Confirm rights and clearances before upload	Sec. 12, 13

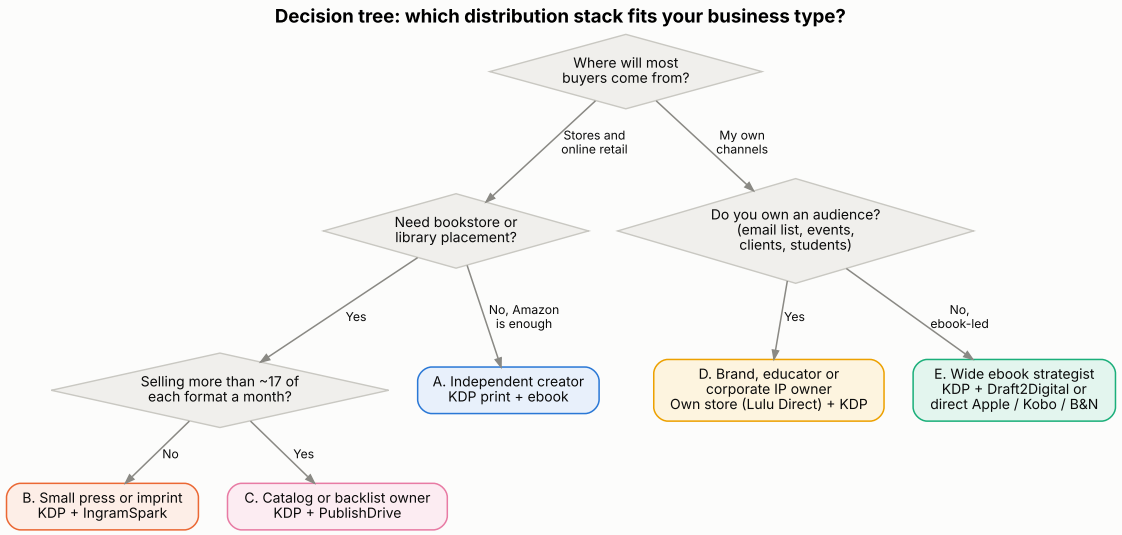

In plain words: the fine print can take money back later (returns), pay you late, or change the rules. Knowing these ahead of time is part of choosing well.

References are to the IngramSpark Agreement (last updated March 20, 2025). Plain-language business summary, not legal advice.

Prices, fees and rates as of October 11, 2026. Sources: IngramSpark Agreement (Lightning Source)

DECISION WALKTHROUGH

How to read the decision tree

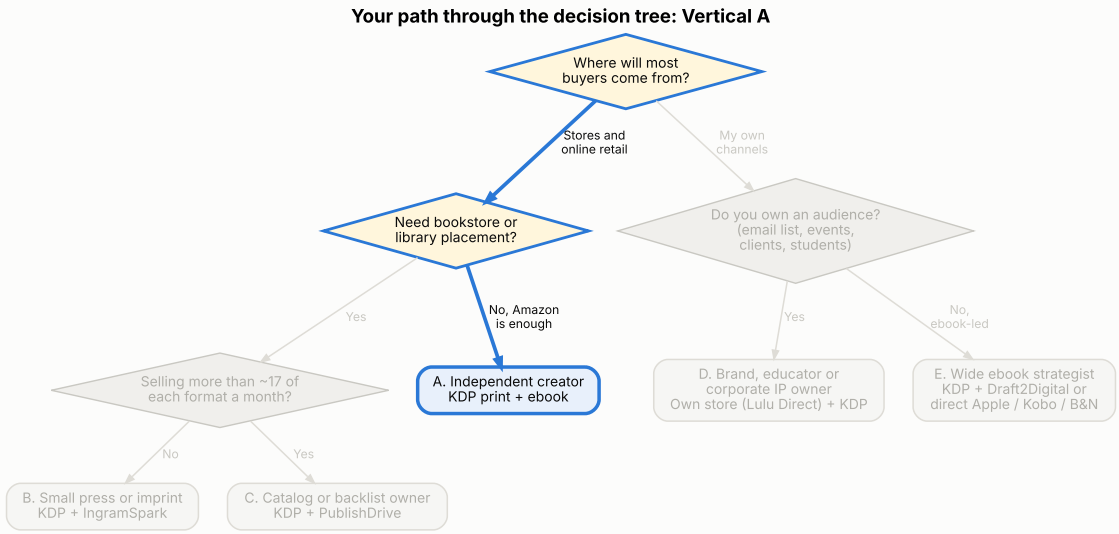

1. **Start at the top diamond.** Ask where most of your buyers will come from: stores and online retailers, or channels you own like an email list, events or a website.
2. **Store path:** if Amazon alone is enough, you land on Path A. If you need bookstores or libraries, ask how many you sell each month.
3. **Volume check:** under about 17 sales of each format a month, a per-sale wholesaler is cheaper (Path B). Above it, a flat monthly plan wins (Path C).
4. **Own-channel path:** if you already have an audience, sell direct and keep the store's slice (Path D). If you are ebook-first, spread across every ebook store (Path E).
5. **Then:** answer the two follow-on questions on exclusivity and returns.

The 17-a-month switch point comes from the crossover analysis.

DECISION WALKTHROUGH · PATH A

If you are an independent creator: here is your path

OPTION 1 (RECOMMENDED)
KDP print + ebook

OPTION 2 (TEST ARM)
KDP + Draft2Digital for other ebook stores

OPTION 3 (STRETCH)
KDP + KDP Select (Kindle Unlimited)

Who you are: One work, discovered mostly on Amazon, with a small budget.

$6.79	158	$5,961
kept per $16.99 paperback on KDP	sales (print + ebook) to break even	Year-1 money kept at 50 sales a month

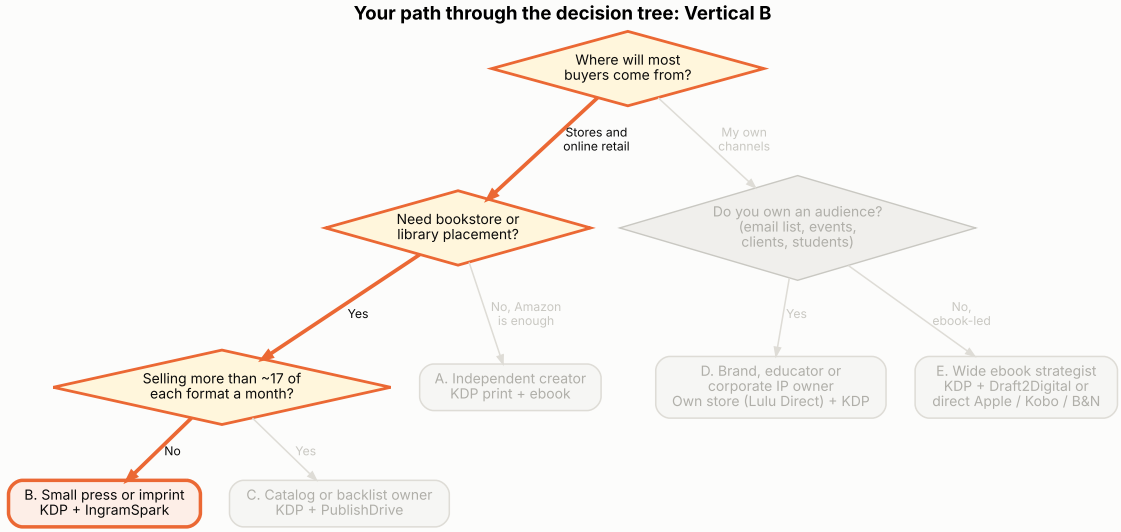

Summary and insight

Amazon is where your readers already shop, and KDP keeps the biggest slice of each sale, so it pays back your start-up costs fastest. Adding bookstore distribution now would cut what you keep per book in half without a plan to get shelf space.

What to do

- **Do now:** Publish print and ebook on KDP; price the ebook between $2.99 and $9.99 to earn 70%.
- **Do now:** Register the copyright before launch and budget for the $85 fee.
- **Do now:** Skip KDP Expanded Distribution; it keeps only $3.40 per copy.
- **Test next:** Run a 90-day price test ($16.99 vs $14.99); keep the lower price only if sales rise more than 21%.
- **Watch:** Watch breakeven progress monthly; when you pass 158 sales, consider adding a wide ebook route (Path E).

If you are a small press or imprint: here is your path

OPTION 1 (RECOMMENDED)
KDP + IngramSpark, 55% returnable

OPTION 2 (TEST ARM)
KDP + IngramSpark, 40% non-returnable

OPTION 3 (STRETCH)
KDP + B&N Press + IngramSpark

Who you are: A curated list that needs bookstore and library placement.

$3.33	272	105 days
kept per copy at a 55% discount	sales to break even	average wait for IngramSpark cash

Summary and insight

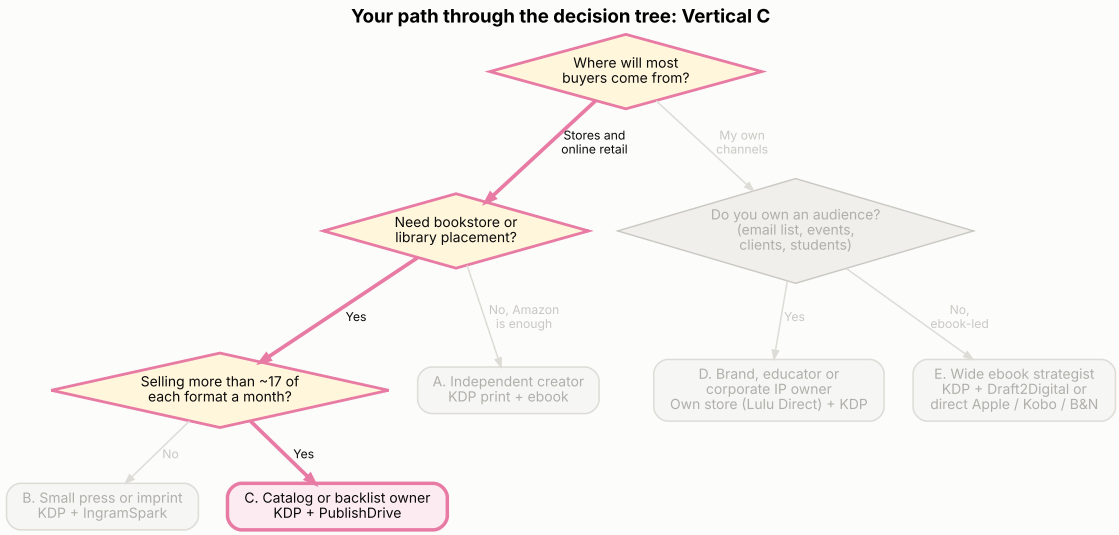

Bookstores expect a 55% discount and the right to return books, which shrinks what you keep and adds risk. In exchange you reach 45,000+ outlets that KDP cannot. KDP still handles Amazon, where it pays twice as much per copy.

What to do

- **Do now:** Use KDP for Amazon and IngramSpark for bookstores and libraries.
- **Do now:** Start IngramSpark titles non-returnable; switching later leaves a 180-day return tail.
- **Do now:** Keep a cash reserve for the 90-day payment lag.
- **Test next:** Test 55% returnable against 40% non-returnable; returnable must sell 77% more copies to come out ahead.
- **Watch:** Reconcile IngramSpark statements monthly for returns and offsets; revisit Path C if any title passes 17 sales of each format a month.

DECISION WALKTHROUGH · PATH C

If you are a catalog or backlist owner: here is your path

OPTION 1 (RECOMMENDED)
KDP + PublishDrive

OPTION 2 (TEST ARM)
KDP + IngramSpark + Draft2Digital

OPTION 3 (STRETCH)
PublishDrive for everything

Who you are: Many titles with steady monthly sales.

16.6
sales/format/month where the flat fee wins

$3,905
Year-1 kept on PublishDrive vs $3,568 IngramSpark

$21,038
Year-1 kept at 250 sales a month

Summary and insight

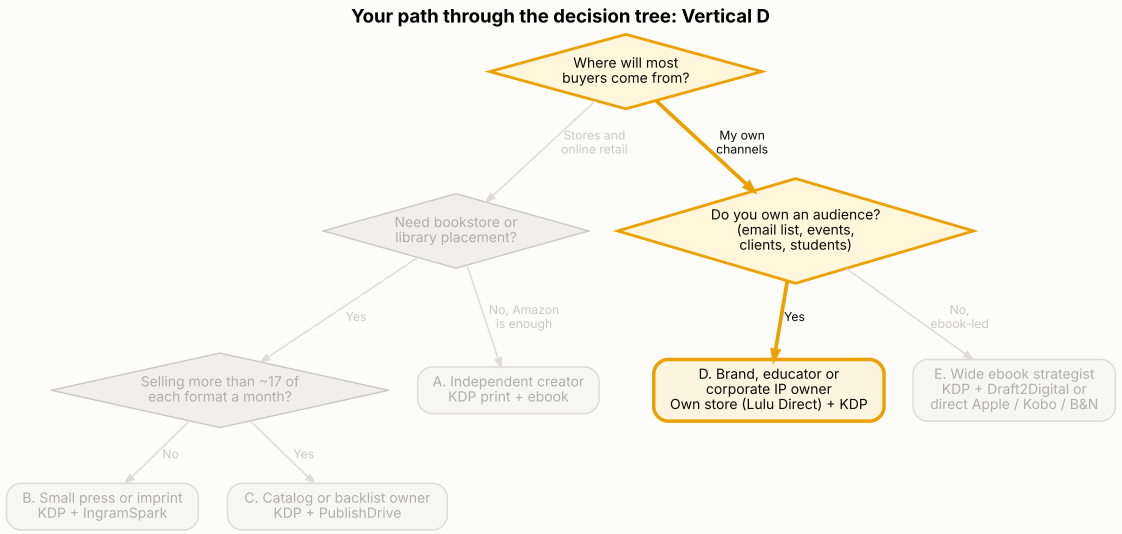

With steady volume, a flat monthly fee costs less than paying a cut on every sale. PublishDrive prints through the same Ingram network, so you keep wide reach while dropping the 1.875% per-sale fee.

What to do

- **Do now:** Keep KDP for Amazon; move wide print and ebook distribution to a PublishDrive plan sized to your title count.
- **Do now:** Check each title's monthly sales against the 16.6 switch point.
- **Do now:** Use the Excel model to compare plan tiers ($13.99 to $83.99).
- **Test next:** Move half the catalog first and compare 90 days of results against titles left on IngramSpark.
- **Watch:** Watch per-title volume each quarter; low sellers may be cheaper on a per-sale route.

DECISION WALKTHROUGH · PATH D

If you are a brand, educator or corporate IP owner: here is your path

OPTION 1 (RECOMMENDED)
Own store (Lulu Direct) + KDP

OPTION 2 (TEST ARM)
IngramSpark Share & Sell links + KDP

OPTION 3 (STRETCH)
Lulu Bookstore + KDP

Who you are: Already has an audience: clients, students, events or a website.

$9.59	+$2.80	~167
kept per $16.99 copy sold on Lulu's own store	more per copy than KDP	own-store sales to break even (estimate)

Summary and insight

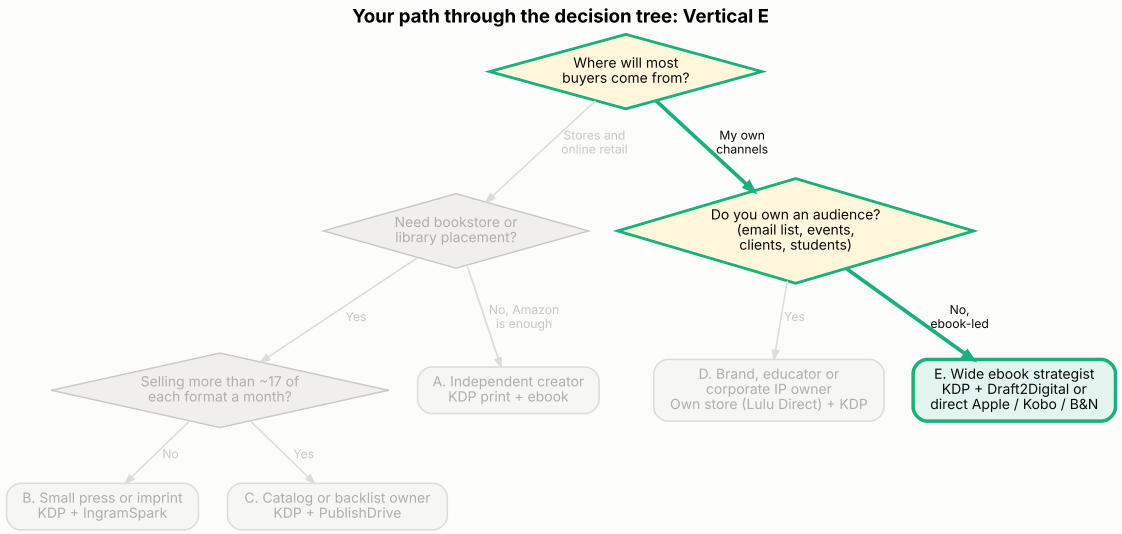

When you bring the buyers yourself, you do not need to give a store its slice. Selling through your own site with print-on-demand fulfillment keeps the most per copy, while KDP lets new people discover you.

What to do

- **Do now:** Sell print copies from your own site with Lulu Direct (no revenue share; you pay printing and shipping).
- **Do now:** Keep KDP listed for discovery and reviews.
- **Do now:** Use IngramSpark Share & Sell links for one-off campaigns.
- **Test next:** Send half your audience to your own store and half to Amazon for one campaign; compare money kept per visitor.
- **Watch:** Watch fulfillment costs and customer support load as direct sales grow.

DECISION WALKTHROUGH · PATH E

If you are a wide ebook strategist: here is your path

OPTION 1 (RECOMMENDED)
KDP + direct Apple, Kobo, B&N

OPTION 2 (TEST ARM)
KDP + Draft2Digital

OPTION 3 (STRETCH)
KDP + PublishDrive (above 40/month)

Who you are: Digital-first and wants readers on every ebook store.

$3.49
kept per $4.99 ebook sold direct

$3.14
kept through Draft2Digital

6.1%
monthly swing in Kindle Unlimited pay

Summary and insight

Going direct to Apple, Kobo and B&N keeps the most, but takes more uploads. Draft2Digital trades about 35 cents a sale for one upload. Kindle Unlimited pays from a shared pot that changes monthly, so it is less predictable.

What to do

Do now: Publish the Kindle edition on KDP directly.

Do now: Use Draft2Digital for other stores, or go direct to Apple, Kobo and B&N if you can manage several uploads.

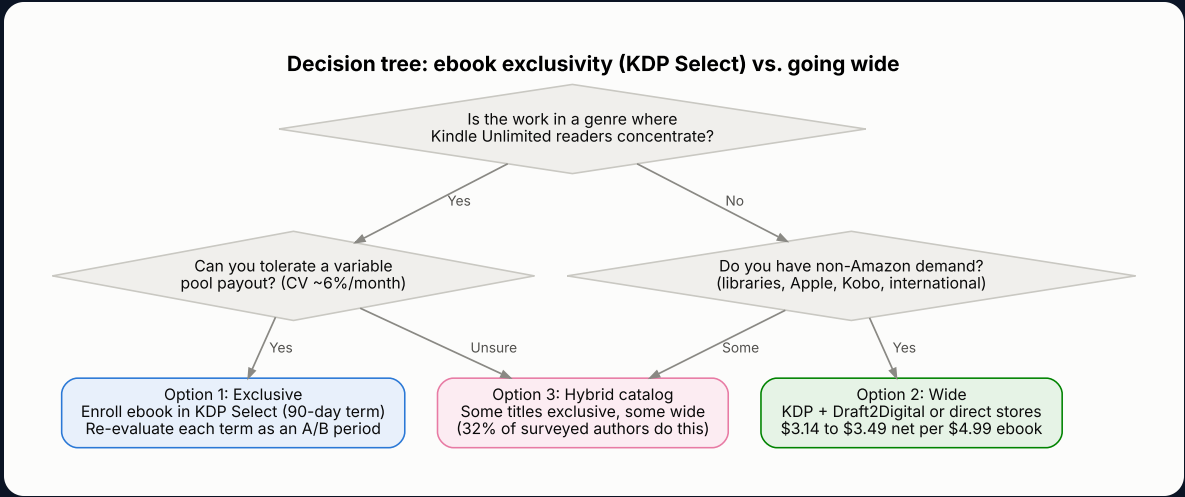

Do now: Price between $2.99 and $9.99 to keep KDP's 70% rate.

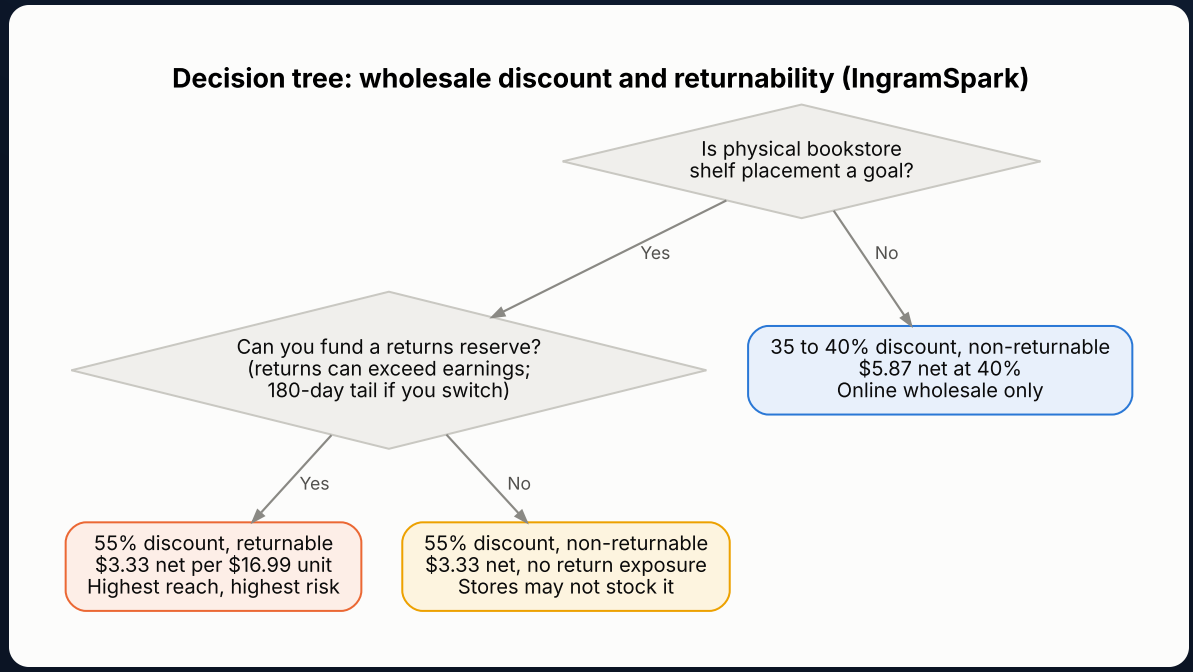

Test next: Test exclusivity: enroll one title in KDP Select for one 90-day term and compare to a wide title.

Watch: Plan Kindle Unlimited income as a range; above 40 ebook sales a month, compare a PublishDrive plan.

DECISION WALKTHROUGH

Two follow-on decisions for every path: exclusivity and returns

Exclusivity, in plain words: Kindle Unlimited is like a library pass that pays authors from a shared pot. You must sell the ebook only on Amazon for 90 days. Choose it if your genre lives there and you can handle pay that changes monthly; otherwise stay wide. 38% of surveyed authors keep every book exclusive and 30% stay fully wide.

Returns, in plain words: letting stores return unsold books gets you on more shelves, but you pay for the books that come back, and that bill can be bigger than what you earned. Start non-returnable unless shelf space is the main goal and you have cash set aside.

Prices, fees and rates as of October 11, 2026. Sources: Written Word Media 2025 Indie Author Survey; Profitable.app KENP rate tracker; IngramSpark Agreement (Lightning Source)

STAKEHOLDER ROLES

What each team should do, whatever the path

Team	Their job here	What they should do
Finance and FP&A	Own the model and the monthly variance review.	Track money kept per sale vs plan by driver; forecast cash with 45 to 105 day lags; re-run breakeven when any fee changes.
Marketing	Own price tests and where traffic goes.	Run one A/B test per quarter with a pre-set breakeven lift; send owned audiences to the highest-margin store.
Rights and legal	Own copyright registration and contract terms.	Register before launch; review returns, liability and change-notice clauses; confirm all rights and clearances before upload.
Investors and partners	Judge whether the plan pays back.	Ask for breakeven units, margin of safety, DSO and the scenario range rather than a single sales forecast.
Operations	Own uploads, metadata and timing.	Turn on distribution only at launch; keep ISBNs and metadata consistent across stores; log every price change.

CHOICE OPTIONS

Options at a glance for every stakeholder type

	Stakeholder	Option 1: Recommended	Option 2: Test arm	Option 3: Stretch	Breakeven marker
A	**Independent creator**	KDP print + ebook	KDP + Draft2Digital	KDP + KDP Select	158 sales
B	**Small press or imprint**	KDP + IngramSpark 55% returnable	KDP + IngramSpark 40% non-returnable	KDP + B&N Press + IngramSpark	272 sales
C	**Catalog or backlist owner**	KDP + PublishDrive	KDP + IngramSpark + Draft2Digital	PublishDrive only	Switch point 16.6/month
D	**Brand, educator or corporate**	Own store (Lulu Direct) + KDP	IngramSpark Share & Sell + KDP	Lulu Bookstore + KDP	~167 own-store sales
E	**Wide ebook strategist**	KDP + direct Apple, Kobo, B&N	KDP + Draft2Digital	KDP + PublishDrive (above 40/month)	Ebook-only economics

Option 1 keeps the most money per sale for that business type. Option 2 changes one thing and doubles as the B group in an A/B test. Option 3 adds reach once sales can support it.

RECOMMENDATION

Decision request: two channels now, one test every 90 days

1. Launch

Every path lists on KDP plus the one route your decision path picks. Keep print non-returnable at launch and turn on distribution only on release day.

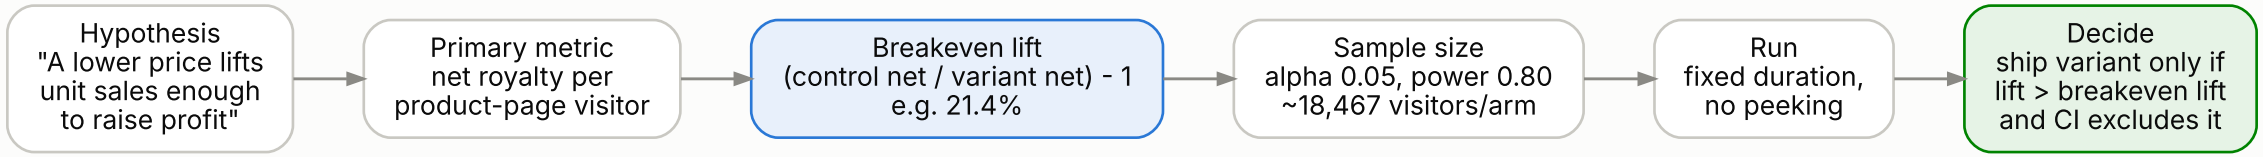

2. Test

One A/B test per 90 days: price first, then store terms. Write down the metric (money kept per visitor) and the breakeven lift before starting, and do not stop early.

3. Review

Hold a monthly variance review and a quarterly re-forecast. Revisit exclusivity and subscriptions once sales pass 17 of each format a month.

A/B test workflow for distribution decisions

Success measures: breakeven reached within the planned number of sales; money kept per sale within 5% of plan; cash received within the modeled wait; one decision-grade A/B result per quarter.

METHODOLOGY

How the numbers were built

Model

- One Python model (analysis/model.py) writes every dataset in /data; the deck, Excel model and Tableau story read the same numbers.
- Base case: $16.99 paperback, 200 pages, $4.99 ebook (2 MB), equal sales per platform.
- Variance = platform's money kept minus KDP's, split into store share, production and fee drivers that add up exactly.
- A/B sample sizes use a two-proportion z-test (95% confidence, 80% power).

Assumptions to replace

- Print costs for IngramSpark ($4.00), B&N Press ($3.50) and Lulu ($5.00) are planning estimates.
- The $1,500 launch budget, the 65/35 channel mix, the launch-decay curve and Path D's own-store breakeven are illustrative.
- All prices, fees and rates are as of October 11, 2026. The data is refreshed every three months; next refresh January 11, 2027.
- Status note: certain works referenced are in the initial stage of pre-publication copyright registration with the U.S. Copyright Office.

REFERENCE

Glossary of analytics and FP&A terms

A/B test	A fair comparison of two versions on one measure, run long enough to trust the result.
Breakeven point	Sales at which total money kept equals start-up costs.
Coefficient of variation (CV)	How much something swings, compared to its average.
Cost variance analysis	Explaining a cost gap by splitting it into its causes.
Gross-to-net (GTN)	The steps from list price to the money you keep.
Pool-based payout	Pay that comes from a shared pot split by usage.
Scenario analysis	Comparing results under slow, normal and great outcomes.
Working capital gap	Money earned but not yet collected.
Breakeven lift	How many more sales a cheaper option needs just to match the original.
Channel share / take rate	The part of the price the store or marketplace keeps.
Contribution margin	Money kept from one sale after that sale's own costs.
Days sales outstanding (DSO)	Average days between a sale and the cash arriving.
Margin of safety	How far sales can drop before you stop covering costs.
Returns reserve	Money held back to cover books that may be returned.
Sensitivity analysis	Changing one input at a time to see which matters most.
